

HTTP AND HTTPS

	HTTP	HTTPS
Abbreviation	Hyper Text Transfer Protocol	Hyper Text Transfer Protocol Secure
Main Purpose	Used to send data between browser and server	Used to send data between browser and server. Plays a major when data like login credentials and bank credentials are collected by websites.
Major difference	Sends data in plain text	Encrypts it for security
Security	Anyone can read the data	Adds an encryption layer that protects your data from being read or stolen while it travels over the internet
Port Number	80	443
Trustable / Verified Portal	It gives an impression to the users that the website is not secure.	The identity of the website becomes verified since the SSL/TLS certification process integrates along with domain creation process itself.
